Accuracy regression report

Report 91856ead-d9bd-4bd6-b249-a330c4433072
Generated 2026-10-16T12:00:00Z
Outcome: hypothesis_report

Working explanation

The recorded preprocessing change is a hypothesis requiring reproduction.

Verified observations

VERIFIED / high confidence

Accuracy decreased from 98% to 91% across 1,000 samples per version.

Supporting sources: [1]
Contradictory/context sources: None

Root-cause hypotheses

HYPOTHESIS / medium confidence

Nearest-neighbor resampling may reduce stroke preservation in low-resolution images.

Supporting sources: [2]
Contradictory/context sources: [1]

Recommended actions

1. Reproduce the change on a stratified evaluation set.

Limitations and uncertainty

1. A citation match does not prove causality.

Source evidence

Citation numbers below refer to recorded source outputs. Citation presence does not establish semantic entailment or causality.
